Education & Learning

ACME

Advanced and Complex Medical Emergencies

A 3 day course for FACEMs, CMOs and senior EM trainees.

Come and learn from an experienced and supportive faculty, in a modern simulation centre at St Vincent's Hospital Melbourne, located on the fringe of the CBD.

This course aims to challenge you in the management of complex medical emergencies through a mix of practical workshops (including advanced airway techniques and vascular access), group discussion and immersive simulation. Beyond the clinical skills required to manage complex emergencies, ACME aims to develop your understanding of factors that impact individual and team performance.

Our experienced faculty provide a safe and supportive environment for you to learn and challenge yourself. With a high faculty-to-participant ratio you can expect individualised support and feedback. The course is a **fully accredited ACEM CPD** activity and counts for **9 hours in the Reviewing Performance domain**. Advanced trainees are also welcome to attend and should be in the last two years of training. (Please supply a letter of support from your DEMT prior to applying.)
