

Advanced and Complex Medical Emergencies

A 3 day course for FACEMs, CMOs and senior EM trainees.

Come and learn from an experienced and supportive faculty, in a modern simulation centre at St Vincent's Hospital Melbourne, located on the fringe of the CBD.

This course aims to challenge you in the management of complex medical emergencies through a mix of practical workshops (including advanced airway techniques and vascular access), group discussion and immersive simulation. Beyond the clinical skills required to manage complex emergencies, ACME aims to develop your understanding of factors that impact individual and team performance.

Our experienced faculty provide a safe and supportive environment for you to learn and challenge yourself. With a high faculty-to-participant ratio you can expect individualised support and feedback. The course is a fully accredited ACEM CPD activity. Trainees should be in the last two years of training and must supply a letter of support from their DEMENT prior to applying.
