

# Facility-based Emergency Care: Pacific regional priorities and standards

Pacific  
Community  
Communauté  
du Pacifique

1

Trained and credentialed staff  
with core skills and knowledge

24hr rostering,  
safe working hours

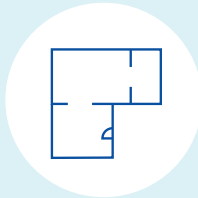

Only 38%

of PIC clinicians report having EC-trained staff in their hospitals

2

Well designed emergency  
departments according to  
Pacific regional standards

Designated area and standard  
equipment for resuscitation of  
adults and children

Only 44%

of PIC clinicians report a good area for safe resuscitation and emergency care in their hospitals\*

3

A recognised triage  
system

Clinical care guidelines adapted  
for the Pacific context

Only 18%

of PIC clinicians report reliable and consistent use of triage in their countries\*

4

Computer-based data collection,  
documenting the burden of  
emergency care disease

Measuring quality and safety of  
care to drive improvement

More than 90%

of PIC clinicians cannot access consistent information about the emergency  
care needs of their population\*

Government recognition  
of emergency care as an  
essential component of  
the healthcare system

Government support  
through training  
opportunities,  
employment and  
career structures

32%

of PIC clinicians report that  
their country has a plan for  
emergency care\*
